See OBP copyrights and licenses. © 1996-2014, Amazon.com, Inc. or its affiliates Interpretation of body motion communication Kinesics is the interpretation of body motion communication such as facial expressions and gestures, nonverbal behavior related to movement of any part of the body or the body as a whole. The equivalent popular culture term is body language, a term Ray Birdwhistell, considered the founder of this area of study,[1] neither used nor liked (on the grounds that what can be conveyed with the body does not meet the linguist's definition of language). Birdwhistell's work Kinesics was first used in 1952 by an anthropologist named Ray Birdwhistell. Birdwhistell wished to study how people communicate through posture, gesture, stance and movement.[2] His ideas over several decades were synthesized and resulted in the book Kinesics and Context.[3] Interest in kinesics specifically and nonverbal behaviour generally was popularized in the late 1960s and early 1970s by such popular mass-market (nonacademic) publications as How to Read a Person Like a Book.[4] Part of Birdwhistell's work involved filming people in social situations and analyzing them to show elements of communication that were not seen otherwise. One of his most important projects was The Natural History of an Interview, a long-term interdisciplinary collaboration including Gregory Bateson, Frieda Fromm-Reichmann, Norman A. McQuown, Henry W. Brosin and others.[5] Drawing heavily on descriptive linguistics, Birdwhistell argued that all movements of the body have meaning and that nonverbal behaviour has a grammar that can be analyzed in similar terms to spoken language. Thus, a "kineme" is "similar to a phoneme because it consists of a group of movements which are not identical, but which may be used interchangeably without affecting social meaning." [6] Birdwhistell estimated that no more than 30 to 35 percent of the social meaning of a conversation or an interaction is carried by the words.[7] He also concluded that there were no universals in these kinesic displays, a claim that was disputed by Paul Ekman, who was interested in analysis of universals, especially in facial expression.[8] Modern applications In a current application, kinesic behavior is sometimes used as signs of deception by interviewers looking for clusters of movements to determine the veracity of the statement being uttered, although kinesics can be equally applied in any context and type of setting to construe innocuous messages whose carriers are indolent or unable to express verbally. Relevant concepts[9] include: Emblems - Body movements or gestures that are directly translatable into a word or phrase Illustrators - Accompany or reinforce verbal messages Batons - Temporally accent or emphasize words or phrases Ideographs - Trace the paths of mental journeys Deictic movements - Point to a present object Kinetographs - Depict a bodily action Spatial movements - Depict a spatial relationship Pictographs - Draw a picture of their referent Rhythmic movements - Depict the rhythm or pacing of an event Affect Displays - Show emotion Regulators - Control the flow and pace of communication Manipulators - Release physical or emotional tension Kinesic behaviors are an important part of nonverbal communication. Body movements convey information, but interpretations vary by culture. As many movements are carried out at a subconscious or at least a low-awareness level, kinesic movements carry a significant risk of being misinterpreted in an intercultural communication situation. On the Origin of Language by Andrej Poleev. Retrieved from " The soft skill that I will be researching and making the main focus of this blog is kinesics. Kinesics is the study and interpretation of nonverbal communication via body language, such as facial expressions or hand gestures. This skill is important to me because it is a skill that I am personally lacking in, and I believe that it can be a very powerful tool if mastered and properly utilized. Whether it be consciously or subconsciously, we are constantly communicating information through our body gestures on a daily basis. Some questions I have pertaining to this particular soft skill that I would like to answer through this project are: Why do we use body language so frequently? How can I teach myself (and others) to become better communicators through reading and interpreting body language and gestures? How can kinesics be used in the workplace to enable us to interact in a more effective manner? My goal for the end of this project is to be able to fluently interpret body language and read the true emotions, feelings and intentions that people subconsciously give off through body language, and to be able to teach this skill to others. I want to be able to use kinesics to tell whether someone is angry, upset, or stressed, especially when they may not come and say it outright. I will measure my progress by trying to utilize the skill more and more on a daily basis and taking note of each situation I'm in where kinesics can be used effectively, as well as through the level of engagement on these blog posts. I plan to achieve my goal of mastering this skill by practicing the skill in my everyday life, as well as researching articles and publications related to this topic and seeking out the advice of others who may be more fluent in this skill than I. I will also take note of my own body language and the things that I may communicate subconsciously through my bodily gestures or posture.
